

# Local Boards of Health Toolkit

The **Local Boards of Health Toolkit** is designed to assist board of health and board of supervisor members with their **roles and responsibilities** in promoting the mission of public health.

Current and crucial resources in the toolkit include:

- **Laws** relevant to local public health
- **Functions and essential services** that local health departments are responsible for providing
- **Program standards** for local and state public health
- **Evaluation tools** for local public health
- **Presentations** on critical topics and resources featuring state and local public health representatives

The **Local Boards of Health Toolkit** will be offered to board members through the **Prepare Iowa Learning Management System**.

The toolkit was released in the spring of 2008 and extensively updated in early 2010 and early 2016.
